Call for grant applications for the [Network and Information Technologies Doctoral Programme](#). The deadline for applications is **11 February 2018**.

The UOC is offering 11 grants for the **Network and Information Technologies Doctoral Programme** for the 2018/2019 academic year. The number of places will be determined by and subject to the UOC's budget. To be eligible for the UOC Doctoral Grants Programme students must be full-time and physically present on the University's premises.

The usual duration of the grants is three years, but in some cases they can be extended to a fourth year for postdoctoral work. Grants require annual renewal. Renewal is contingent on students achieving the training and research objectives established in each case. One of these objectives is to complete the doctoral thesis within a maximum of three years, after which students can apply for a further one-year postdoctoral grant.

The programme also includes the possibility to develop an industrial doctorate, with grants for the best applicants with agreements with companies. Doctoral students undertaking an industrial doctorate will have a university supervisor and a tutor at the company.

The Universitat Oberta de Catalunya (UOC) is a fully accredited online university based in Barcelona and serving over 60,000 students worldwide. The University welcomes doctoral students who want to develop their research in a highly qualified and international setting and on a doctoral programme that is valid in the European Higher Education Area.

Prospective applicants can find information on the application procedure, and on the content and organization of the doctoral programmes on the website. We recommend that you contact the researcher who is in charge of [the thesis proposal you are interested in](#), and send them a letter of introduction.

The research lines and groups associated with the programme are organized around network and information technologies, focusing on areas such as information security, distributed systems, open and decentralized networks, multimedia systems and applications, e-learning technology, information systems, computer vision, and software and service engineering.

To submit your application please click on the "**Go to application page**" button.
